

Program Review Executive Summary Template

Based on the thorough program review addressing all criteria in policy, a comprehensive report should be possible within ten or fewer pages. This template is provided to assist institutions in providing a brief summary, which is to be presented to the institutional governing board prior to submission to the State Regents. Executive summaries should be possible within two pages using this template format.

|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Duplication and Demand | <ul style="list-style-type: none"> • No other programs in the Midwest City/ Del City area offer college level physics courses • Physics majors at RSC has increased 6.3% since 2013 |
| Effective Use of Resources | <ul style="list-style-type: none"> • Increased and stable enrollments and credit hour production without significant increase in expenditures or FTE's |
| Strengths and Weaknesses | <p>Strengths:</p> <p>Transfer agreements and working relationships with multiple Universities.</p> <p>The program has well qualified instructors who have broad teaching insights and backgrounds as well as research experience within the discipline. Classes are over-sized so instructors and students can interface easily. Laboratories, laboratory equipment, and classroom materials are well maintained and a full-time physics laboratory support specialist is highly utilized and an invaluable asset to the Physics Program.</p> <p>The program's academic curriculum is diverse and solid and prepares students for future studies. Rose State College is a low cost alternative for a variety of students and is accessible within a wide area.</p> <p>The physics program has implemented honors components in student coursework and laboratory work and research. Physics students have been recipients of the <i>Outstanding Honors Project</i> at Rose State College several times. And received recognition at State Competitions.</p> <p>The program's academic curriculum is diverse and solid and prepares students for future studies. Rose State College is a low cost alternative for a variety of students and is accessible within a wide area.</p> |

| | |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | Weaknesses: Lack in consistency of qualified upper-level students to employ and serve within tutorial capacities. Industry demands for bachelor's degree as minimum requirement for most physics related employment opportunities. Laboratory equipment is often stretched thin as to accommodate the many laboratory sections required each term. Student Advisement is too often out of the Engineering & Science Division. Limited equipment budgets |
| Recommendations | <p>Continue to supplement student-related research projects and additional coursework</p> <p>Support the increase size of Physics Program faculty as needed.</p> <p>Increasing marketing and recruitment efforts for prospective students.</p> <p>Directly engaging current students to encourage and support retention.</p> <p>Maintaining close working relationships with 4-year institutions to ensure course transferability.</p> <p>Closely measuring future program success by continuously reviewing the number of majors and graduates.</p> <p>Actively engaging with industry and government to ensure program viability, to take advantage of collaboration benefits, and to provide opportunities for student scholarships and internships.</p> |

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|------------------------------------------------------------|-----------------------------|
| Analyze and procure current computer related programs, software, and hardware, and to integrate them into lectures, laboratories, homework, and research activities as appropriate. | Improve technology associated with all physics courses | Institute distance learning of lower level physics courses | Increased equipment budgets |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|------------------------------------------------------------|-----------------------------|

Program Review Summary Template
3.7 Academic Program Review
 (optional)

The Physics Program provides students with access to quality instruction by well qualified faculty so that students can complete their associate degree and/or transfer to a four year program with the necessary content to pursue and achieve their goals.

A. Centrality of the Program to the Institution's Mission:

The faculty develops, reviews, and updates curriculum for the physics program and courses as appropriate. Every full time physics faculty adheres to consistent assessment (testing) and laboratory standards to assure the students are learning course material at a level commensurate with other institutions of higher learning.

Analyses and Assessment (including quantitative and qualitative measures) noting key findings from internal or external reviews and including developments since the last review:

3.7.5 Process (Internal/External Review):
 Previous Reviews and Actions from those reviews:

The Physics Department has the goal and objective of providing wide-ranging lower division courses and A.S. degree which are comparable and transferable to degree programs at 4-year colleges and universities. Course handouts and information by all faculty provide students with the necessary information about the courses and their policies. Courses are designed to support and service existing degree programs within Rose State College and also provide necessary commensurate with 4-year schools.

Based on the thorough internal or external program review addressing all criteria in policy, a comprehensive report should be possible within ten or fewer pages. This program review template is provided to assist institutions in compiling the program review information, which is to be presented to the institutional governing board prior to submission to the State Regents. Executive summaries should be possible within two pages using the provided template (Program Review Executive Summary Template).

| |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>B.2 Quality Indicators (including Higher Learning Commission issues):</p> <p>The Physics Program is a fundamental academic program and is an important component of Rose State College. Improvements in curriculum, course offerings, and laboratory equipment are pursued continuously. New courses and laboratory experiments are being added, modified, and updated as the science/technology or college mission requires. The students in this program are generally non-traditional full-time students, so their progress through the program is slow, and classrooms and laboratories are modern and well equipped as appropriate.</p> <ul style="list-style-type: none"> • Average course size is 15.3 students. • Students are consistently evaluated in effective communication and quantitative reasoning participation in the Course Equivalency Project of the Oklahoma Regents for Higher Education). • Course equivalencies are regularly confirmed for transfer to other institutions (via Modern Physics for Engineers (capstone course) is a very prevalent course. • Students have access to tutoring and help sessions • Classroom facilities are modern and well equipped as appropriate. • The physics program evaluates student outcomes in a number of ways. Students are required to present their findings and conclusions in both written and oral formats at various points in the curriculum. In these presentations, students must be able to identify and gather knowledge that is applicable to the situation, use an appropriate critical thinking methodology to formulate a solution, and communicate their findings in a professional manner. Additionally, RSC evaluates the quantitative reasoning and effective writing skills of the student body on a college wide basis by surveying randomly selected classes. • Both full time and adjunct physics faculty consistently evaluated by students, peer faculty, and administration. The performance ratings for faculty from all three evaluating groups are consistently high. <p>RSC students have access to tutoring through the Learning Resource Center, and assistance with math and chemistry questions is readily available through the RSC Math Lab. Additionally, Professors are available to answer questions from all physics classes during office hours or via appointment alone with a Laboratory Support Specialist available to assist when</p> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>B.1. Program Objectives and Goals:</p> <p>The Associate in Science in Physics Degree Program provides students with the analytical skills and scientific knowledge to expand and apply critical thinking to all facets of learning. The expected Program outcome is to provide a comprehensive lower-division education for students who plan to transfer to a baccalaureate degree program in the S.T.B.M. areas.</p> <p>The Physics Program is a fundamental academic program and is an important component of Rose State College. Improvements in curriculum, course offerings, and laboratory equipment are pursued continuously. New courses and laboratory experiments are being added, modified, and updated as the science/technology or college mission requires. The students in this program are generally non-traditional full-time students, so their progress through the program is slow, and classrooms and laboratories are modern and well equipped as appropriate.</p> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

The physics program directly supports and services other program and course requirements in our division as needed (e.g. Chemistry, Engineering, & Mathematics).

| | | | | | | | | | |
|-----------------------------------|-------------------------------------------------------|----------------------------------|-----------------------------------|-----------------------------|-------------------------------|------------------------------------------------------|------------------------------------------------------|----------------------------------------|----------------------------------------------------------------------|
| PHYS 1513 Introduction to Physics | PHYS 1253 Introduction to Musical Acoustics and Sound | PHYS 2401 General Physics Lab. I | PHYS 2411 General Physics Lab. II | PHYS 2414 General Physics I | PHYS 2424 General; Physics II | PHYS 2434 Physics I for Engineering & Science Majors | PHYS 2444 Physics I for Engineering & Science Majors | PHYS 2943 Modern Physics for Engineers | our division as needed (e.g. Chemistry, Engineering, & Mathematics). |
|-----------------------------------|-------------------------------------------------------|----------------------------------|-----------------------------------|-----------------------------|-------------------------------|------------------------------------------------------|------------------------------------------------------|----------------------------------------|----------------------------------------------------------------------|

All physics courses are taught exclusively for all S.T.E.M. majors. Course routinely offered are as follows:

- a. Number of courses taught exclusively for the major program for each of the last five years and the size of classes:

b. Other Quantitative Measures:

| Time Frame (e.g.: 5 year span) | Head Count (majors) | Graduates (A.S.) | 2013 | 2014 | 2015 | 2016 | 2017 | 2 |
|--------------------------------|---------------------|------------------|------|------|------|------|------|---|
| 3 | 15 | 18 | 15 | 15 | 16 | 16 | 17 | 2 |
| 2 | 18 | 15 | 15 | 15 | 16 | 16 | 17 | 2 |
| 1 | 2 | 2 | 1 | 1 | 1 | 1 | 2 | 2 |
| | | | | | | | | |

B.3. Minimum Productivity Indicators:

| External Curricular Evaluation | The content of courses in the EEP are regularly evaluated by the engineering programs at The University of Oklahoma, The University of Central Oklahoma, and Oklahoma State University. | Capacity to Meet Needs of Students | The Engineering and Science Division at RSC employs an academic advisor to serve all of its students including those enrolled in the Physics Program. |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| | | | |

and where appropriate Finally, RSC provides many excellent workshops for students and faculty designed to enhance professional and personal development within many capacities.

| Faculty | Credential | Institution that granted degree | Varies | M.S. or higher | M.S., Engineering Physics | Adjunct faculty |
|----------------|---------------|---------------------------------|--------|----------------|---------------------------|-----------------|
| James Gilber | M.S., Physics | University of Minnesota | | | | |
| Mahmoud Radfar | | | | | | |

e. A roster of faculty members, faculty credentials and faculty credential institution(s). Also include the number of full time equivalent faculty in the specialized courses within the curriculum:

| Number of Courses | Aught | Number of Credit Hrs | Number of Enrollments | Number of Faculty | 2013 | 2014 | 2015 | 2016 | 2017 |
|-------------------|-------|----------------------|-----------------------|-------------------|------|------|------|------|------|
| | | | | | 39 | 36 | 39 | 36 | 36 |
| | | | | | 2013 | 2014 | 2015 | 2016 | 2017 |
| | | | | | 343 | 360 | 311 | 382 | 12 |
| | | | | | 2013 | 2014 | 2015 | 2016 | 12 |
| | | | | | 39 | 36 | 39 | 36 | 36 |

d. The number of credits and credit hours generated in the program that support the general education component and other major programs including certificates:

| Travel | Equipment | Supplies | Full-Time Faculty | Adjunct Faculty | Total |
|--------|-----------|----------|-------------------|-----------------|-----------|
| | | | | | \$200,018 |
| | | | | | \$ 57,483 |
| | | | | | \$138,035 |
| | | | | | \$1,000 |
| | | | | | \$3,500 |
| | | | | | 0 |

e. Direct instructional costs for the program for the review period (annual):

| Program for five years: | Number of Courses | Number of Credit Hrs | Number of Enrollments | Aught | Offered | 2013 | 2014 | 2015 | 2016 | 2017 |
|-------------------------|-------------------|----------------------|-----------------------|-------|---------|------|------|------|------|------|
| | | | | | | 68 | 67 | 65 | 65 | 65 |
| | | | | | | 574 | 2014 | 518 | 623 | 44 |
| | | | | | | 2013 | 2014 | 2015 | 2016 | 2017 |
| | | | | | | 36 | 37 | 39 | 39 | 39 |

b. Student credit hours by level generated in all major courses that make up the degree program for five years:

The demand for the physics degree has been relatively steady over the years. Also, demand for enrollment, completion data, and occupational data.

Support programs remains steady and increasing due to requirements for supporting programs (mainly engineering) in the recent years.

has been significantly increasing due to requirements for supporting programs (mainly

B.5.a. Detail demand from students, taking into account the profiles of applicants,

Demand for physics courses are either steady or increasing, while demand for the major remains steady and appropriate for two-year programs.

There are no duplicate programs in the RSC area or adjoining communities.

Addressees Duplication:

B.5. Duplication and Demand Issues:

In cases where program titles imply duplication, programs should be carefully compared to determine the extent of the duplication and the extent to which that duplication is unnecessary. An assessment of the demand for a program takes into account the aspirations and expectations of students, faculty, administration, and the various publics served by the program. Demand reflects the desire of people for what the program has to offer and the needs of individuals and society to be served by the program.

B.5. Duplication and Demand:

Records show that 71% of students transferred to another institution to continue their studies with 50% graduated. However, information and student data regarding continuation is not available, incomplete, or misleading due to some students taking courses while currently enrolled in other institutions.

g. If available, information about the success of students from this program who have transferred to another institution:

Records show that 36 students transferred to another institution to continue their studies with 18 graduated. However, information and student data regarding employment and/or college program continuation is not available and/or incomplete. An Association of Science degree in physics would generally be utilized for a student to transfer into an advanced degree program, and not necessarily directly into the workforce.

f. If available, information about employment or advanced studies of graduates of the program over the past five years:

All physics courses are taught within the traditional manner at college level with the appropriate laboratory courses to accompany them. Course information and content, power point presentations, etc, are offered on the D2L learning platform. A newly developed on-line hybrid course has been offered as a introductory Physics course is being offered. The Modern Physics course has been offered as a

B.5.e. The process of program review should address meeting demands for the program through alternative forms of delivery. Detail how the program has met these demands:

- Institute distance learning of lower level physics courses
- Improve technology associated with all physics courses
- Analyze and procure current computer related programs, software, and hardware, and to integrate them into lectures, laboratories, homework, and research activities as appropriate.
- Actively engaging with industry and government to ensure program viability, to take advantage of collaboration benefits and opportunities.
- Maintaining close working relationships with 4-year institutions to ensure course transferability
- Directly engaging current students to encourage and support retention
- Increasing marketing and recruitment efforts for prospective students are pursued
- Faculty regularly serve as judges for community science fairs and visit local schools at all grade levels. This expands and promotes relationships of the S.T.E.M. faculty with the local schools and introduces potential new students to R.S.C. programs.

B.5.d. Detail indirect demands in the form of faculty and student contributions to the cultural life and well-being of the community:

Intellectual property is not an outcome of the program.

B.5.c. Detail demand for services or intellectual property of the program, including demands in the form of grants, contracts, or consulting:

The US Bureau of Labor Statistics reports an expected steady demand for S.T.E.M. graduates. This will include the demand for physics graduates, and graduates in programs which rely heavily upon physics material and courses (e.g. Engineering, Chemistry, Mathematics, etc.).

B.5.b. Detail demand for students produced by the program, taking into account employer demands, demands for skills of graduates, and job placement data:

Institutional Program Recommendations: (describe detailed recommendations for the program as a result of this thorough review and how these recommendations will be implemented, as well as the timeline for key elements)

*Low Producing Program Reviews follow a different format and template.

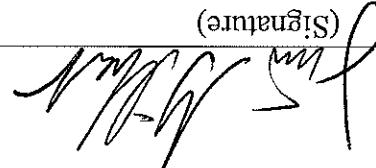

Multiple physical and computer/multimedia demonstrations for learning and lecture related support are utilized on a regular basis. A newly created on-line introductory physics course soon to be implemented. Laboratory courses utilize and the needed equipment and materials to perform the required and necessary student related physics laboratory work.

The Physics Laboratory Lecture and classroom have been renovated and upgraded via the 21 million dollar capital RSC capital improvements. Also, a new campus student center is its initial planning phase.

B.6. Effective Use of Resources:

| | | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Engage with industry and government in any way appropriate to ensure program viability, as to take advantage of collaboration benefits.</p> <p>Current</p> | <p>Computer as allowed by availability</p> <p>Program budget and vendor software, and hardware, as to integrate and implement them into physics lectures, laboratories, homework, and student related research activities as appropriate.</p> <p>Current</p> | <p>Improve technology and laboratory equipment associated with all physics courses</p> <p>Lecture and laboratory courses</p> <p>Institute distance learning of lower level physics courses</p> <p>SP 18</p> |
